

Improve the following code for:

- Style
- Simplicity
- Maintainability

```
def f():
    if A:
        z()
        if B:
            y()
            if C:
                x()
                if D:
                    w()
                    return True
                else:
                    v()
                    return False
            else:
                u()
                return False
        else:
            t()
            return False
    else:
        s()
        return False
```
